

**IN THIS DOCUMENT, WE WILL OFFER YOU SOME CALCULATIONS TO CONTEMPLATE, WHICH WILL HELP YOU STRATEGIZE **HOW TO GET THE MOST PROFIT** OUT OF OUR PROJECT.**

Besides, we will talk about what generator is worth investing your money in; what generator you should consider upgrading to the 15th level to maximize the profit, etc.

After reading the information in this document, you can easily decide to either focus your attention on upgrading your generator or reinvest accumulated tokens to purchase another one. We recommend upgrading some of the generators to level 15 and selling others after generating enough profit.

**IF YOU PLAN TO GENERATE THE MOST PROFIT WITHOUT INVOLVING YOURSELF IN GREAT RISKS,**

one of the strategies would be purchasing a generator you can currently afford and withdrawing tokens until you gain back the money you invested. Afterward, you could invest the profit you gained into upgrading the generator to level 15 to maximize stable income.

**IF YOU PLAN TO MAXIMIZE YOUR INCOME IN THE SHORTEST PERIOD,**

we recommend upgrading your generator to its maximum capacity. For example, the 110 AVR generator upgraded to the 15th level mines more tokens than the 550 AVR generator in its basic configuration.

Likewise, you can buy tokens without having to wait and invest them into upgrading your generator to its final configuration.

Another option is to maintain balance: withdraw tokens but occasionally upgrade your generator.

**WE RECOMMEND DELAYING UPGRADING THE 110 AVR NFT GENERATOR UNTIL YOU **RECOUP EXPENSES ON ITS PURCHASE** BECAUSE THE DURATION OF UPGRADING IT TO ITS FINAL 15TH-LEVEL VERSION IS MORE THAN 232 DAYS.**

- 1 For example, upgrading your generator to 1st level will cost you 6 AVR tokens.
- 2 To generate 6 AVR tokens, you would have to wait for eight days minimum (without considering the depreciation, gas, and oil expenses).
- 3 Then, you would have to wait for another day for the upgrade to be complete. In total, to upgrade your 110 AVR generator to the first level you would need more than NINE days.

- 1 Let's say you bought the 550 AVR NFT generator. The first level upgrade will cost you 7.6 AVR tokens. To mine 7.6 AVR tokens it will take only TWO days.
- 2 Then, you upgrade your generator level by level. In order to accumulate enough tokens to upgrade to level two, you will have to wait not 2 days, but 1.2. Then 0.5 days, etc.
- 3 Once you start the level 7 upgrade, you will no longer have to wait for enough tokens to accumulate to increase the level of your generator. Your generator will mine a sufficient amount of tokens to start upgrading it to the next level immediately by the time the previous upgrade is complete.
- 4 The same goes for every next level. You will no longer have to wait for a sufficient amount of tokens to accumulate because your generator will be continuously mining enough. A similar principle applies to 5 500 and 55 000 AVR generators. Therefore, upgrading the 550 AVR generator will take approximately 126 days (maybe a bit longer if we consider the required gas, oil, and depreciation expenses).

If you decide to purchase tokens and use them to **accelerate the upgrade process** of the 110 AVR generator, it will only take ONE day instead of NINE to upgrade it to the first level. Therefore, improving the generator to its full capacity will only take 120 days instead of 232.

If you want to **start getting the most profit** and not upgrade your generator, it doesn't matter which generator to buy.

If you want to upgrade your generator **as quickly and profitably as possible** (price/time ratio) by reinvesting (a generator mines tokens, you reinvest it into upgrading), we'd recommend purchasing a 550/5 500 or 55 000 AVR generator. The 110, 1 100, and 11 000 AVR generators are better off generating your income and then upgraded.

# 110 AVR GENERATOR
